conveyor products

CAI MECHANICAL BELT FASTENERS

STEELGRIP™

All parts listed are each unless otherwise stated

Flat Power Transmission Lacing

Combining toughness with ease of installation, Steelgrip™ makes a strong, smooth splice on all types of transmission and light conveyor belts.

Each standard box and economy pack includes lacing, gauge pin, corrugated hinge pin and instructions.

Item	Item Code	Belt Thickness Range (mm)	Minimum Pulley Diam. (mm)	Weight (kg)	Sets Per Box	Length (mm)

45U	510012	7.9 - 9.5	229	1.5	4	300

STAPLEGRIP

All parts listed are each unless otherwise stated

Staplegrip Preset Lacing

For use with modern lightweight, high strength belting. Designed to operate smoothly over slider bed or troughing applications.

Each carton contains
4 complete joins and
4 x Nylon coated hinge pins.

Rubber Lagging Specifications

250mm wide strips.

CN Bonding Layer.

Natural and FRZ Compounds have 60-70 Durometer.

Available in other thicknesses up to 30mm.

Available in smooth ceramic - same price.

Lagging Installation Guide

All parts listed are each unless otherwise stated

Lagging is manufactured in 250mm wide strips and should be installed horizontally across the pulley.

Selection Chart

Pulley Diameter (mm)	# Strips required	Pulley Diameter	# Strips required
319 - 397	5	955 - 1034	13
398 - 477	6	1035 - 1114	14
478 - 557	7	1115 - 1193	15
558 - 636	8	1194 - 1273	16
637 - 716	9	1274 - 1352	17
717 - 795	10	1353 - 1432	18
796 - 875	11	1433 - 1511	19
876 - 954	12	1512 - 1591	20

Belle Lagging not recommended for pulleys under 320mm diameter.

**Belle Ceramic
Lagging**

**Belle Rubber
Plain Lagging**

**Belle Rubber
Diamond Lagging**

Lagging Installation Guide

- Using the pulley diameter, select the correct number of strips from table above.
- Trim Belle Lagging to be 50 - 100mm longer than pulley face.
- Ensure the pulley has a sand blasted and clean surface. Use a solvent to ensure there is no grease or oils present.
- Paint pulley surface with a suitable metal primer (ie Chemlok 205) and follow manufacturers guide for drying times.
- Apply one coat of Cold Bonded Adhesive (ie Tip Top SC4000) to lagging (edges as well) and pulley surface. Follow manufacturers recommendation on open times.
- Scribe a straight line across the pulley to act as a guide for laying first strip.
- After suitable drying time, apply second coat of adhesive to lagging and pulley surface. For large pulleys, working in stages might help.
- Let each surface dry per the adhesive manufacturers recommendation before commencing application of lagging to pulley.
- Apply the first strip along the scribed line and press down the full strip. Using a rubber mallet, hammer down the lagging to remove air bubbles. A stitching roller can be used on the seams.
- Apply subsequent strips using the same method until three strips remain.
- Using offcuts of the lagging as a width guide, determine how the remaining three strips must be cut to ensure a proper fitment.
- When applying the last three strips, apply the narrowest first and the widest last to provide maximum flexibility in fitment process.
- Hammer down all strips, and ensure there are no gaps between the strips.
- Trim excess rubber from edges around the pulley at a 45 degree angle.
- Allow the adhesive to cure per manufacturers recommendations before operation.
